WORK EXPERIENCE

Senior Backend Engineer

03/2023 – Present
Mumbai

CleverTap

- Built **Alfred**, an internal AI-powered engineering assistant enabling natural language queries across codebases, logs, metrics, and internal knowledge bases, reducing dependency on engineering escalations for support and engineering teams.
- Built **Hydra**, an internal tools platform using Java and the Vaadin framework, consolidating organisation-wide engineering utilities into a single interface.
- Built internal Java debugging utilities, reducing TTR for critical incidents from **~48 hours** to **~3 hours**.
- Optimised application processes to reduce database query volume from ~160K to ~300 calls per 30-minute window (**~99.8%** reduction) by improving query execution and access patterns, significantly improving system performance and resource utilisation.
- Own L3 support for backend services handling high-volume production traffic, resolving complex issues requiring deep Java and system-level debugging.
- Perform RCA using Java code analysis, logs, stack traces, and metrics to identify and fix recurring production failures.
- Collaborate with Product and QA teams to prioritise fixes, improve monitoring, and strengthen system reliability.

Tech: Java, MongoDB, Vue.js, Node.js, TypeScript, Splunk, Grafana, IntelliJ, GitHub, Bamboo

Software Engineer

08/2020 – 03/2023
Mumbai

Larsen and Toubro Infotech

Project - Citi Bank (ISG)

- Provided **L2/L3 support** for large-scale **BFSI backend applications**, ensuring high availability under strict SLA requirements.
- Conducted **deep Java backend investigations** including log analysis, code walkthroughs, and issue reproduction.
- Led **root cause analysis** for major incidents and implemented permanent fixes to prevent recurrence.
- Coordinated **production deployments** using **uDeploy**, reviewing runbooks and ensuring rollback readiness.
- Implemented backend **business logic enhancements** and supported **UAT validation**.
- Wrote optimized **SQL queries** for production diagnostics and ad-hoc reporting.

Tech: Java (Spring Boot), Oracle DB, SQL, Ab Initio, ITRS Geneos, AppDynamics, Kibana

EDUCATION

Bachelor of Science - Information Technology

07/2017 – 08/2020
Mumbai

Ramniranjan Jhunjhunwala College - 9.7 /10

SKILLS

Languages & Frameworks: Java, Spring Boot, Core Java, React.js, Vue.js

Databases: OracleDB, SQL, MongoDB

Observability: Splunk, ITRS Geneos, AppDynamics, Kibana, Grafana

Practices: Incident Management, Problem Management, RCA, Change Management

Developer Tools: IntelliJ, Git, Docker, VS Code.

PROJECTS

YouTube Tracker

Java, React.js, Docker

- Designed REST-style backend services in Core **Java** to fetch and process YouTube channel data.
- Exposed APIs consumed by a **React.js frontend** to display heatmaps and insights.

TweetSight – Twitter Sentiment Analysis System

Python, React.js, Flask

- Developed a **Python backend** for tweet classification using NLP techniques.
- Integrated with a **React.js frontend** for visualization.

CERTIFICATIONS

Azure Fundamentals (AZ-900) | ITIL | React | Java In-Depth

ACHEIVEMENTS & AWARDS

— Spot Award (Q1 2026) | Most Valuable Player (2025) | Rising Star (2023) | Team Player (2022) | Pat on the Back (2021)
